**View Log**

**USB Password**

**Disk Defrag**
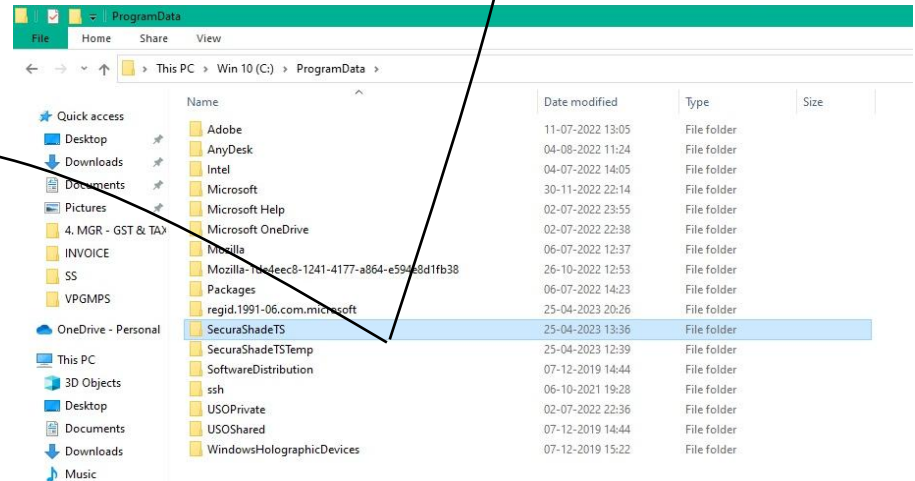

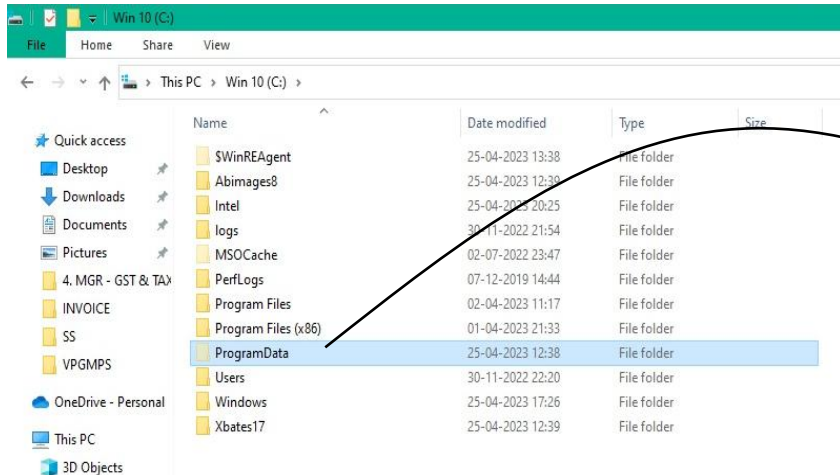

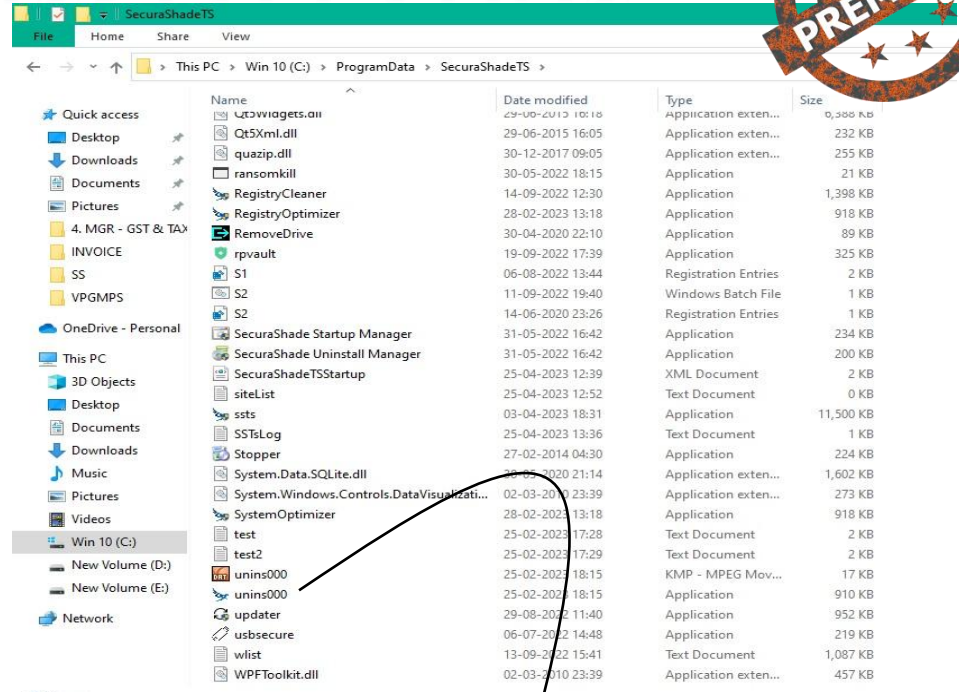

# FEATURES @SETTINGS

| Sr. No. | FEATURE | DESCRIPTIONS |
|---|---|---|
| 01. | **SKIP Files/Folders** | In this option, user will have the options to select their desired files and folders and keep them away from scans. So, whenever a scan runs, it will not scan theses selected files/folders. |
| 02. | **VIEW LOGS** | Here, all the movements and all the activity of the user will be stored. So, any kind of fraudulent movement can be tracked from here. All the activation & deactivation movement will be stored with date and time. |
| 03. | **USB PASSWORD** | For the USB to be scanned and worked upon, this password has to be given. The Password will be entered by the User each time, a device is plugged in through the USB. |
| 04. | **DISK DEFRAGMENTATION** | Defragmentation, is the process of reorganizing the data stored on the hard drive so that related pieces of data are put back together, all lined up in a continuous fashion. It picks up all of the pieces of data that are spread across your hard drive and puts them back together again increasing performance. How Fragmentation Occurs - Disk fragmentation occurs when a file is broken up into pieces to fit on the disk. Because files are constantly being written, deleted and resized, fragmentation is a natural occurrence. When a file is spread out over several locations, it takes longer to read and write resulting in slow computer performance. |

PREMIUM

# PRODUCT UNINSTALLATION

**UNINSTALLING THE ANTIVIRUS –**

1) Go to My Computer ---- C Drive
2) Inside C Drive ----- Search for PROGRAM DATA
3) Inside PROGRAM DATA ----- Search for "**SECURASHADE TS**" folder ------ Inside the folder search for "**unins000.exe**" ----- then run the exe
4) The Antivirus is successfully UNINSTALLED from the PC.
